

Many People consider me to be the "Hydrangea Queen"!

My true love is understanding Ecology, Ecosystems, and Environmental Science, and applying these ideas to Residential Urban Design.

That means...What Really Works!!! Long Term and Short Term.

Hosta's are Not Native...But they are Very Tough!! Their only Enemies are Voles!
(And an occasional wierd fungus that I call Sudden Rot Syndrome...Treat with a large handful of Garden Lime.)

I have found them to be Drouth Tolerant, Tolerant of standing water, accepting of Morning Sun.
They Love Containers...And really create a Refined Statement when used as single specimins in Containers.

Beautiful and Durable. My kinda girls.

They are the Final Kiss on any Garden Design.

We keep as many as we can afford to at our nursery. I hope you find your favorite in our Hosta List.

Diane and Wolfgang
